12.1 Psychological Disorder: What Makes a Behavior “Abnormal”?

The focus of the next two chapters is to many people the heart of psychology. This emphasis on abnormal psychology—the application of psychological science to understanding and treating mental disorders—is appropriate, as more psychologists are involved in the diagnosis and treatment of psychological disorder than in any other endeavor, and these are probably the most important tasks ...

people's physical appearance. One early approach, developed by the German physician Franz Joseph Gall (1758-1828) and known as phrenology, was based on the idea that we could measure personality by assessing the patterns of bumps on people's skulls (Figure 12.1, "Phrenology"). In the Victorian age, phrenology was taken seriously ...

Generalized anxiety disorder (GAD) is a common and disabling disease. The ICD-10 diagnostic criteria for GAD are listed in Box 1 and eBox 1: It is characterized by worries based on extant dangers (e.g., of a spouse having an automobile accident) whose likelihood is overestimated and whose negative consequences are viewed as catastrophic. Worries can rapidly generalize to multiple areas of ...

Psychological tests. According to Anastasi and Urbina, psychological tests involve observations made on a "carefully chosen sample [emphasis authors] of an individual's behavior." A psychological test is often designed to measure unobserved constructs, also known as latent variables. Psychological tests can include a series of tasks or problems that the respondent has to solve.
