Fluid Mechanics

Fluid statics or hydrostatics is the branch of fluid mechanics that studies the condition of the equilibrium of a floating body and submerged body "fluids at hydrostatic equilibrium and the pressure in a fluid, or exerted by a fluid, on an immersed body".. It encompasses the study of the conditions under which fluids are at rest

The form or shape of  $F$  in d'Alembert's formula involves the argument  $x - vt$ . Constant values of this argument correspond to constant values of  $F$ , and these constant values occur if  $x$  increases at the same rate that  $vt$  increases. That is, the wave shaped like the function  $F$  will move in
