API Features Current Weather Available on: All plans. To query the weatherstack API for real-time weather data in a location of your choice, simply attach your preferred location to the API's current endpoint as seen in the example request below. Depending on your subscription, you can also make a bulk location request by passing multiple semicolon-separated locations to the API URL.

API Documentation - weatherstack

The moderation team is monitoring different sources 24/7 for the disclosure of information about new or existing vulnerabilities. If a new issue is determined, additional data from other sources is collected and a new VulDB entry created. This entry is then pushed to customers, the web site and accessible via API and social media accounts.

Legacy JavaScript API. Dart Sass also supports an older JavaScript API that's fully compatible with Node Sass (with a few exceptions listed below), with support for both the render() and renderSync() functions. This API is considered deprecated and will be removed in Dart Sass 2.0.0, so it should be avoided in new projects.
