### M250 | Object-Oriented Java Programming | Open University

Object-Oriented Concepts in Java. As we all know that Java is an object-oriented language, there are many concepts of the same. Some object-oriented concepts in Java are: 1. Abstraction. An abstraction is a technique of hiding irrelevant details from the user, and showing only the necessary ones.

### Java Basics for Beginners to Learn Java Programming ...

Object-oriented programming (OOP) is a programming paradigm based on the concept of "objects", which can contain data and code: data in the form of fields (often known as attributes or properties), and code, in the form of procedures (often known as methods).. A feature of objects is that an object's own procedures can access and often modify the data fields of itself (objects have a notion of ...

### Object-oriented programming - Wikipedia

Java also supports multiple programming paradigms, including object-oriented programming and functional programming. Writing code in Java is heavily tied to using classes and then using those classes to create objects. Although possible, it's not a language that you would generally use for a simple one-off script. Python
