A burl results from a tree undergoing some form of stress. It may be caused by an injury, virus or fungus. Most buris grow beneath the ground, attached to the roots as a type of malignancy that is generally not discovered until the tree dies or falls over. Such buris sometimes appear as groups of bulbous protrusions connected by a system of rope-like roots.

Burl - Wikipedia
The Oakland™ Oak Leaf Holly Tree is a new and exciting variety of holly that has unique foliage and a dense, pyramidal form. The evergreen leaves are a semi-glossy rich green and formed somewhat like an oak leaf, rather than like a traditional holly leaf.

A submerged forest is the in situ remains of trees (especially tree stumps) that lie submerged beneath a bay, sea, ocean, lake, or other body of water. These remains have usually been buried in mud, peat or sand for several thousand years before being uncovered by sea level change and erosion and have been preserved in the compacted sediment by the exclusion of oxygen.

Submerged forest - Wikipedia
Then, dig a trench around the tree in a circle that is the appropriate size for the tree's root ball. Tie up the lowest branches of the tree to protect them. Cut the roots below the trench by inserting a sharp-edged spade into the earth repeatedly until the roots beneath the circle of the trench have all been cut.
