Biology is the scientific study of life. It is a natural science with a broad scope but has several unifying themes that tie it together as a single, coherent field. For instance, all organisms are made up of cells that process hereditary

1. Overview 1.1

Historical

Considerations.

Developmental biology is the science that investigates how a variety of interacting processes generate an organism's heterogeneous shapes, size, and structural features that arise on the trajectory from embryo to adult, or more generally throughout a life cycle (Love 2008; Minelli

Cancer - How Tobacco Smoke Causes Disease: The Biology and ...

On land, sulfur is deposited in four major ways: precipitation,

direct fallout from the atmosphere, rock weathering, and geothermal vents (Figure 9). Atmospheric sulfur is found in the form of sulfur dioxide (SO_2), and as rain falls through the atmosphere, sulfur is dissolved in the form of weak sulfuric acid (H_2SO_4).
