In mathematics, a limit is the value that a function (or sequence) approaches as the input (or index) approaches some value. Limits are essential to calculus and mathematical analysis, and are used to define continuity, derivatives, and integrals.. The concept of a limit of a sequence is further generalized to the concept of a limit of a topological net, and is closely related to limit and ...

Limit (mathematics) - Wikipedia

In mathematics, a geometric series is the sum of an infinite number of terms that have a constant ratio between successive terms. For example, the series $+ + + +$ is geometric, because each successive term can be obtained by multiplying the previous term by $/$. In general, a geometric series is written as $+ + + + \dots$, where $/$ is the coefficient of each term and r is the common ratio between adjacent ...
