That worked for me to revert to Cisco-Linksys WRT160N. I did the so called '30-30-30 reset' to be on the safe side. Then I've set a static IP address on my PC to 192.168.1.7 (as with router in FW download mode it doesn't give DHCP addresses), connected to the router at 192.168.1.1 using my web-browser (you are getting a very basic FW-upload-only page after the reset rather than the ...

Remove / uninstall DD-WRT or 3rd-party firmware and revert back to the ...

The 192.168.0.1 router IP address is a private address, and it's used as the default router IP address for certain routers, including some models from Cisco, D-Link, LevelOne, Linksys, and many others.

192.168.2.1 IP Address and Routers Using It. Private IP addresses, such as 192.168.2.1, were defined by the Internet Assigned Numbers Authority (IANA), a nonprofit private American corporation that oversees global IP address allocation, to delay IPv4 address exhaustion. The exhaustion of IPv4 addresses has been anticipated since the late 1980s and is the main reason why the IPv4 addresses will ...

Introduction. BeEF utilises YAML files in order to configure the core functionality, as well as the extensions. Most of the core BeEF configurations are in the main configuration file: config.yaml, found in the BeEF directory. To configure extensions, modify the config.yaml files located in the extension folder that you're trying to modify. For more information on the command module config ...
