This program performs fatigue analysis and tri-axial stress computations of coiled tubing in real time, in post-job mode, and/or using manual data entry. The fatigue analysis takes into account the geometry of the coiled tubing, material properties, and the equipment used.

Fatigue Analysis for Coiled Tubing

Coiled tubing offers a number of operational and economic advantages, including: live well intervention, elimination of well kill and potentially damaging heavy-weight kill fluids, reduced operational footprint, horizontal intervention, and the ability to intervene without a rig.

Once the coiled tubing size, flowrates and N2 volumes have been determined, the following should be conducted: 1. Rig up the coiled tubing and pressure test as per standard procedures. 2. Displace the coiled tubing to N2 and perform gas pressure test if required by client. 3. Open well and commence running in hole at 50 ft/min (15 m/min).

Coiled Tubing is the process of running a reel of continuous tubing into a well that is still under pressure. Coiled Tubing equipment is portable and modular although modern reels are reaching high transport weights and offers quick rig-up times. ... Coiled tubing force and stress analysis features have also been developed to assist preventing downhole failures. The computer systems consider specific well geometry, contact friction and coiled tubing material strengths in the determination of the stress conditions and also take into account circulation effects.

1.1 ORGANIZATION OF THE MANUAL This Coiled-Tubing Drilling (CTD) Sound Practices Manual provides tools needed by CTD engineers and supervisors to plan, design and perform safe, successful CTD operations. As emphasized throughout, both careful planning and attention to detail are mandatory for success.

Our ES Series BOP is smaller and lighter than any other comparable BOP on the market today. In addition to a hydraulic ram change that enables easier access to service the rams, the ES Series features a balanced piston on the shear actuator, which eliminates the effects of well pressure when shearing.

Coiled tubing drilling (CTD) is rapidly becoming the drilling method of choice for underbalanced horizontal re-entry drilling in wells with fragile formations. Fast rig-up and shorter trip times make CTD cost-effective and generally results in higher production rates than conventional overbalanced drilling techniques.
