Applying the second of the given boundary conditions shows that the function $() f t$ has the

following value: $2 \left(\frac{1}{2} \right) R R$ Thus the radial velocity in the fluid at any distance r from the sphere at any time t will be: $2 \left(\frac{1}{2} \right) R R r t r r$ Integrating the foregoing equation with respect to r yields the result: $2 \left(\frac{1}{2} \right) \left(\frac{1}{2} \right) R R r t g t r$ where $\left(\frac{1}{2} \right) g t$ is some function of time.
