The Zoology degree program is designed to expose students to all aspects of the study of animals. Following foundation courses on the principles of vertebrate and invertebrate zoology, students may select from a broad range of classes in animal biology, ranging from cellular and developmental biology, physiology, and anatomy to ecology and evolution.

B BIO 355 Behavioral Endocrinology (5) NW Explores how endocrine and neural systems interact to modulate complex behavior. Takes a comparative approach, covering the endocrine and neural bases of behavior in multiple vertebrate taxa. Topics are introduced in lecture then explored through student-led discussion of primary and secondary literature.

Neuroethology is the evolutionary and comparative approach to the study of animal behavior and its underlying mechanistic control by the nervous system. It is an interdisciplinary science that combines both neuroscience (study of the nervous system) and ethology (study of animal behavior in natural conditions). A central theme of neuroethology, which differentiates it from other branches of ...
