A ground proximity warning system (GPWS) is a system designed to alert pilots if their aircraft is in immediate danger of flying into the ground or an obstacle. The United States Federal Aviation Administration (FAA) defines GPWS as a type of terrain awareness warning system (TAWS). More advanced systems, introduced in 1996, are known as enhanced ground proximity warning systems (EGPWS), a ...

### Ground proximity warning system - Wikipedia

An aircraft pilot or aviator is a person who controls the flight of an aircraft by operating its directional flight controls. Some other aircrew members, such as navigators or flight engineers, are also considered aviators, because they are involved in operating the aircraft's navigation and engine systems. Other aircrew members, such as drone operators, flight attendants, mechanics and ground ...

### Aircraft pilot - Wikipedia

The pilots have to know maths to solve all the complicated equations inside the cockpit to fly the airplane. However, modern airplanes today are equipped with all electronic displays. Pilots today carry iPads that can solve the most complicated equations in a blink of an eye. And there are hundreds of applications to aid pilots with the ...

### Which subjects to study to become a pilot? - Pilots Elite

Center will help the pilots navigate to the airport and safely descend through traffic. When the aircraft is about 50 miles away from the destination, Center will have the pilots change to an approach frequency for the destination. To keep things easy, the crew can often stay with one approach controller (same frequency) all the way to landing.

### Stuff Pilots Say! - AeroSavvy

The cockpit of even the smallest and simplest airplane can be an overwhelming place. Fortunately, the most “hands-on” elements of the cockpit—those which enable the pilot to direct the airplane’s actual movement from taxiing to landing—are usually similar from one cockpit design to another.

Navigation is the art and science of determining the position of a ship, plane or other vehicle, and guiding it to a specific destination. Navigation requires a person to know the vehicle's relative location, or position compared to other known locations. Navigators measure distance on the globe in degrees. Understanding latitude and longitude are very important in navigation.
