Intelligent User Interfaces are human-machine interfaces that aim to improve the efficiency, effectiveness and adaptation of the interaction between the user and the computer by representing, understanding and implementing models. The Intelligent User Interface Model (IUIM) consists of an architectural model (which defines the components of

Designing Intelligent User Interfaces: the IUIM Model

With the growing need for intelligent software, exploring the potential of Machine Learning (ML) algorithms for User Interface (UI) adaptation becomes an ultimate requirement. The work reported in this paper aims at enhancing the UI interaction by using a Rule Management Engine (RME) in order to handle a training phase for personalization.

In contrast, an adaptable UI provides tools that allow the user to tailor certain aspects of the interaction in using a system [13], [34].

Adaptive User Interfaces for Intelligent E-Learning ...

In fact, AUI is an interface which adapts itself according to user's profile, platform and environment. Most of the existing work in adaptation of UI relies on manual declarative rules definition using combinations of context criteria (user experience, user motivation, age, etc.) and the interface characteristics (density, color, etc.).
