lower limits of a lab test based on a group of otherwise healthy people. By comparing your test results with reference values, you and your healthcare provider can see if any of your test results fall outside the range of expected values and gain clues to help identify possible conditions or diseases.

137 Values You **Documentation**

Here's the tricky thing about lab values from your doctor: normal may not mean ideal.

For example: let's pretend your heart health was ranked on a scale from 1-10, where 1 was no risk of heart attack at all, and 10 was high risk for a heart attack. While the ideal range of heart health would be 1-3, the "normal" range might be from 1-6.

Know Your Numbers: What the Lab Values from Your Doctor ...

While a lab value of 100 would be optimal, an eGFR over 60 is considered healthy.

Many labs don't actually give a number but might say >60 mL/min/1.7m², which would indicate that the kidney is filtering well. As creatinine often does not rise until late in the process of
