Development of type 2 diabetes is linked to inactivity, obesity and a family history of the disease. Diabetes can also be caused by pregnancy, diseases such as hemochromatosis and by certain medications. Hormonal imbalance in the adrenal glands can also lead to high blood sugar levels and diabetes. Diabetes is classified as type 1 or type 2.

Adrenal Glands and Diabetes | Healthfully

Disorders of the adrenal cortex and medulla can result in glucose intolerance or overt diabetes mellitus. Cushing's syndrome, characterized by excessive secretion of glucocorticoids, impairs glucose tolerance primarily by causing insulin resistance at the post-receptor level.

Systemic treatment with chemotherapy is usually recommended for this kind of metastatic cancer, but if the adrenal gland is the only spread site (isolated adrenal metastases), then surgical removal with laparoscopic adrenalectomy is usually an option.

Diseases of the Adrenal Gland - BCM

Our doctors are experienced in providing personalized care for adrenal disorders, including those disorders that aren't necessarily treated by other doctors. Accurate diagnosis of adrenal disease can be challenging, and our doctors believe that comprehensive, collaborative approaches to treating adrenal disorders lead to the best outcomes.

autoimmune disease, which is the most common cause of Addison's disease, according to the National Institute of Diabetes and Digestive and Kidney Diseases being born with damaged adrenal glands

Adrenal gland: Function, hormones, and disorders

Adrenal disorders (cortex and medulla) The adrenal gland is divided into twodistinct areas, the cortex and the medulla. The cortex is further divided in 3 zones (zona glomerulosa or site of aldosterone synthesis, zona fasciculata or site of cortisol synthesis and zona reticularis or site of androgen synthesis).

Adrenal disorders (cortex and medulla)

This rare disorder develops when the adrenal glands do not make enough cortisol. In most cases of Addison's disease, the body also doesn't make enough of the hormone aldosterone. Addison's is an autoimmune disease—a condition in which the immune system, which is supposed to protect the body, mistakenly attacks the body's own tissues and cells.
