INTRODUCTION. Anaesthesia for non-obstetric procedures is frequently needed for maternal procedures like cervical encirclage, as well as foetal procedures like ex utero intrapartum treatment, at varying times during pregnancy and even for in vitro fertilisation procedures or assisted reproductive techniques. When pregnant patients require surgery the 'two-in-one package', comprising of the ...

Hypertensive Emergencies Mean Arterial Pressure For hypertensive emergencies, the aim is to reduce Mean Arterial Pressure (MAP*) by up to 25% in the first hour of treatment. If the patient remains stable with no evidence of organ hypoperfusion, further reductions in the BP towards normal are indicated over the ensuing 24 hours.

Traditionally, laboratory-based serological tests such as Treponema pallidum particle agglutination (TPPA) and rapid plasma reagin (RPR) are widely used to diagnose treponemal infections (for example, syphilis and yaws). These tests cannot distinguish yaws from syphilis however, and the interpretation of results from these tests in adults who live in yaws endemic areas needs careful clinical ...
