How to Update millions or records in a table Good Morning Tom.I need your expertise in this regard. I got a table which contains millions or records. I want to update and commit every time for so many records (say 10,000 records). I dont want to do in one stroke as I may end up in Rollback segment issue(s). Any suggestions please !!

How to Update millions or records in a table - Oracle

Quoting. Always quote strings containing variables, command substitutions, spaces or shell meta characters, unless careful unquoted expansion is required or it's a shell-internal integer (see next point). Use arrays for safe quoting of lists of elements, especially command-line flags. See Arrays below.

Overtime wages are a type of increased payment that employees can earn when they work more than a certain number of hours in a workday or workweek. Most non-exempt employees in California have a legal right to receive overtime wages when they work long hours.¹ The amount of

overtime depends on the length of the employee's shift and the number of days he or she has worked in the workweek.

Overtime Law in California: A Simple Guide (2022)

For security, do not hardcode the values needed to connect and log into the database in your main script. Python has the convention of a config.py module, where you can keep such values separate from the rest of your code.. Python scripts often build up and tear down large data structures in memory, up to the limits of available RAM.

Parameterized queries. All modern database engines provide a way to write parameterised queries, queries that contain some placeholder that allows you to re-run the query multiple times with different inputs.This protects you from SQL injection attacks, and as an added benefit, the database can often optimise the query so it runs faster.
