Mindfulness-based cognitive therapy (MBCT) was developed as a manualized group-skills training program that would address vulnerability between episodes of recurrent major depression (Segal, Williams, & Teasdale, 2002; Williams, Teasdale, Segal, & Kabat-Zinn, 2007). It was derived from a model of cognitive vulnerability

Independent Variable Definition and Examples

The independent variable is the one factor that you are changing. It is one factor because usually in an experiment you try to change one thing at a time. This makes measurements and interpretation of the data much easier. If you are trying to determine whether heating water allows

Get Free Shadish Cook Campbell

you to dissolve more sugar in the water then your independent variable is the temperature of the water.
