Ford first introduced the 4.0-liter single-overhead-cam (SOHC) engine in 2001, as a replacement for the over-head-valve (OHV) 4.0-liter. Only the Ranger and Explorer made use of this engine, from 2001 through 2004. In 2005, the Mustang, a staple in Ford's lineup, dropped the 3.8-liter engine in favor of this 4.0 liter.

If that is true then we would have to find diagram for fuel pump and injectors and see how to bypass power to them to keep them running even if immobilizer tries to disconnect them. Maybe you can connect voltage tester to certain pin on the pump that is supposed to have voltage with engine running and see if that pin loses voltage when engine dies.

Common rail direct fuel injection is a direct fuel injection system built around a high-pressure (over 2,000 bar or 200 MPa or 29,000 psi) fuel rail feeding solenoid valves, as opposed to a low-pressure fuel pump feeding unit injectors (or pump nozzles). High-pressure injection delivers power and fuel consumption benefits over earlier lower pressure fuel injection, [citation needed] by ...
