The Guide is based on three principles: Replace, Reduce and Refine. Replace animals whenever possible, reduce the number to lowest possible that will produce accurate conclusions, and refine the experimental paradigm to improve the science and the care of the animal.

Health Evaluation of Experimental Laboratory Mice

The American Psychological Association's (APA) Ethical Principles of Psychologists and Code of Conduct (hereinafter referred to as the Ethics Code) consists of an Introduction, a Preamble, five General Principles (A-E) and specific Ethical Standards. The Introduction discusses the intent, organization, procedural considerations, and scope of application of the Ethics Code.

Ethical principles of psychologists and code of conduct

This chapter presents an overview of the ethical, legal, and scientific reasons that mandate the alleviation of animal pain, drawing attention to the principles of the Three Rs (3Rs; replacement, refinement, and reduction) and the central role of refinement in the humane care and use of laboratory animals. It includes discussion of the fundamental concepts of the experience of pain and factors ...

Pain in Research Animals: General Principles and ...

The principles of the 3Rs (Replacement, Reduction and Refinement) were developed over 50 years ago providing a framework for performing more humane animal research. Since then they have been embedded in national and international legislation and regulations on the use of animals in scientific procedures, as well as in the policies of ...

Experimental design and sample size determination

The Humane Society of the United States opposes any cloning of animals for commercial purposes, whether for use as pets or in research or agriculture. Animal cloning is a destructive, needless and often frivolous enterprise. Cloning is a highly experimental procedure, with an enormous number of failures.

Our policies | The Humane Society of the United States

The Three Rs (3Rs) are guiding principles for more ethical use of animals in product testing and scientific research. They were first described by W. M. S. Russell and R. L. Burch in 1959. The 3Rs are: Replacement: methods which avoid or replace the use of animals in research; Reduction: use of methods that enable researchers to obtain comparable levels of information from fewer animals, or to ...
